Dragon® Medical: 8 Ways That It Can Benefit Clinician Documentation

Wayne Kaniewski, MD
Twin Cities EMR Consulting

Decrease or Eliminate Transcription Costs

- Whether you are using paper records or an EHR, Dragon can transcribe your patient care notes.

Decrease Turnaround Time for Patient Care Notes

- Notes are transcribed, edited, and signed immediately, and available to everyone involved in a patient's care.

Add the "Nuance" to EHR-generated Notes

- Today's EHR's produce generic-appearing notes that cannot adequately convey the patient story, OR the care that you provided.
 - This forces clinicians to add details via manual typing
- Note quality is increased, which can positively affect patient care.
- Reimbursement from payers can be improved.

Decrease the "blah blah blah" of Dictation

- Custom commands can be easily created to quickly insert commonly-used phrases, paragraphs, or templates.
- e.g. We can teach you how to easily create a custom command for:
 - "Normal 12 System ROS"...all in YOUR words!

Eliminate Clinician Typing

- Manual typing is a terrible waste of valuable clinician resources.
- Dragon can transcribe 3 to 4 times faster than most clinicians can type.
- With custom (voice) commands, the speed increase is far greater!

Improve Clinician Satisfaction

- "These EHR-generated notes don't sound like my patient, and they don't sound like me"
- "I hate clicking"

Increase Clinician Productivity

- Clicking through dozens of EHR menus to generate a note is a time-intensive and laborious process.
- Having clinicians doing their own typing is a "penny wise but pound foolish" approach.
- Using a combination of Dragon dictation + custom commands can greatly decrease note creation time.

You Do Not Need to Implement an EHR before Using Dragon Medical

- Start realizing all of the benefits of Dragon Medical now
 - Decreased transcription costs can pay for Dragon Medical implementation in a short time
- Working with us during the EHR planning phase can greatly decrease the time spent and expense involved with EHR template development.
- The transition from using Dragon Medical for paper notes to using Dragon Medical in an EHR is an easy one.

Dragon® Medical is registered and owned by Nuance Communications, Inc.
